SUHASINI PHATAK

AI/ML COMPUTATIONAL SCIENCE ASSOCIATE APPLICANT | SOFTWARE DEVELOPER (JS/PYTHON) | B.E. ELECTRONICS & COMMUNICATION, KLS VDIT (2021-2025)

+91 6361328423 | phataksuhasini16@gmail.com | LinkedIn | Portfolio

SUMMARY

Fresh graduate (B.E. Electronics & Communication) with 1 year of hands-on software development experience building full-stack applications (React.js, Node.js, Express.js) and REST API integrations, plus a UI/UX design background. Comfortable with **Git version control, object-oriented programming concepts, and the software development lifecycle** from shipping production features at a product company. Currently strengthening **Python, SQL, and data structures & algorithms** to move into backend, data, and AI/ML engineering work.

TECHNICAL SKILLS

- **Programming & OOP:** JavaScript (ES6+), TypeScript, Python (in progress) — component-based and object-oriented architecture
- **Backend & APIs:** Node.js, Express.js, REST API design & integration, Axios, Multer (file handling), authentication workflows
- **Version Control & SDLC:** Git, GitHub, code reviews, cross-functional collaboration, agile-style iterative delivery
- **Data & Third-Party Integration:** REST-based data processing pipelines, Google Gemini AI API, OpenWeather API, Recharts (data visualization)
- **UI/UX & Frontend:** Figma, Design Systems, HTML5, CSS3, Tailwind CSS, Bootstrap, React Hooks, React Router
- **Learning now:** SQL & database fundamentals, Data Structures & Algorithms — see note below

PROFESSIONAL EXPERIENCE

Swipewire Technologies Private Limited — Junior UI/UX Designer (Sept 2025 – Present)

- Collaborate with development teams to translate designs into pixel-perfect, responsive applications using React.js, HTML5, CSS3, and Tailwind CSS — direct exposure to coding standards and dev workflows.
- Develop reusable React components and implement client-side routing and state management (React Router, useState, useEffect), participating in day-to-day coding and debugging.
- Build and maintain reusable design systems (Components, Variants, Auto Layout, Design Tokens) to improve development efficiency and consistency across 3+ client projects.
- Work with cross-functional, fast-paced teams using Figma Dev Mode, contributing to requirement discussions and delivering cross-browser compatible interfaces.

PROJECTS (FULL-STACK, REST APIS, BACKEND)

AI Resume Analyzer — React.js, Node.js, Express.js, Tailwind CSS, Google Gemini AI API

- Built a full-stack application with a Node.js/Express.js backend exposing REST APIs consumed by a React.js frontend, including PDF upload handling (Multer) and automated data processing via a third-party AI API.
- GitHub: github.com/Suhasiniphatak/AI-Resume-Analyzer |
- Live: ai-resume-analyzer-jet-chi.vercel.app

AI Mock Interview Platform — React.js, Node.js, Express.js, Tailwind CSS, Google Gemini AI

- Developed backend services and REST endpoints for authentication and dynamic interview workflows, integrating an AI API for automated question generation and feedback — end-to-end frontend-to-backend data flow.
- GitHub: github.com/Suhasiniphatak/AI-Mock-Interview-Platform |
- Live: ai-mock-interview-platform-mauve-kappa.vercel.app/

EDUCATION

B.E., Electronics and Communication Engineering — KLS Vishwanathrao Deshpande Institute of Technology, Haliyal, Karnataka (Dec 2021 – July 2025)
